LEAN SIX SIGMA GREEN BELT CERTIFICATION TRAINING - SIGNATURE SERIES

Generate a group quote today OR Register now for the next public course date

COURSE LENGTH: 5.0 DAYS

Comprehensive training and exam preparation to achieve the Lean Six Sigma Green Belt Certification with the International Association of Six Sigma Certification (IASSC) – the most highly regarded independent, global Green Belt Certification.

This course is very comprehensive and doesn't require any pre-requisite training. You will learn the foundation skills and develop up to the Green Belt level as part of this intensive, 5-day course. However, this training does move quickly and covers a lot of in-depth information in great detail. In addition to the scheduled course time (40 hours) you will need to set aside 18 hours for self-directed learning to ensure you stay up to date with absorbing and understanding the concepts discussed in the course. Total course duration is up to 58 hours.

For participants focused on Certification preparation, it is important to know that the IASSC Global Certification is exam based. Which means you can sit the exam and become certified as soon as you have successfully passed the exam, which is based on global benchmarks.

Our Lean Six Sigma Green Belt Training courses are run by Lean Six Sigma experts. Attend a course today throughout Australia including, Brisbane, Sydney, Parramatta, Melbourne, Canberra, Adelaide and Perth. Please click on the Public Class tab below to view our Lean Six Sigma Green Belt Certification course schedule by city or click the In-House Training tab to receive a free quote for courses delivered at your preferred location.

LEAN SIX SIGMA GREEN BELT CERTIFICATION TRAINING - SIGNATURE SERIES COURSE OUTLINE

FOREWORD

The Lean Six Sigma Green Belt Certification is a highly respected credential - it means you have demonstrated a level of mastery of specific methodologies and techniques required to help drive Continuous Improvement projects that have measurable, commercially focused outcomes.

This certified training course will provide you with the theory and then the opportunity to practice the techniques to help you reach the standard of Lean Six Sigma - Green Belt.

The course duration is five days. In addition to the scheduled course time (40 hours) you will need to set aside 18 hours for self-directed learning to ensure you stay up to date with absorbing and understanding the concepts discussed in the course. Total course duration is up to 58 hours.

You will be supported by Australia's leading trainers and become part of a global network of Six Sigma and Continuous Improvement specialists through PD Training and the IASSC.

OUTCOMES

After completing this course you will have the:
- Understanding of the concepts, implementation & objectives of Six Sigma
- Ability to use a structured approach to process improvement
- Ability to use DMAIC (Define, Measure, Analyse, Implement and Control) methodology
- Skill to predict, prevent and control defects in a process
- Understanding of the elements of waste
- Skills to achieve sustainable quality improvement through process improvement
- Understanding of the tools of process discovery
- Understanding of variation in processes
- Skills to reduce variation in processes and achieve predicted outcomes
- Ability to identify, measure and analyse process potential
- Usage of inferential statistics
- Usage of hypothesis testing
- Understanding when to use which Six Sigma methodology
- Ability to use Capability Analysis to control processes
- Knowledge of the interdependence of Lean tools
- Skills to prevent, identify and control defects
- Understanding and use of statistical process control
- Skills to train, document, monitor, respond, and align systems
- Skills to provide sustainable and cost-effective improvement in processes

MODULES

Lesson 1: What is Quality (Introduction)
- Understand the history of quality
- Gathering the voice of the customer
- Garvin's five definitions of quality
- Definitions of quality from quality gurus
- Differences in quality between products and services

Lesson 2: Enterprise-wide View (Introduction)
- Understand the history of continuous improvement
- Six Sigma as a Value
- Six Sigma as a Measure
- Six Sigma as a Metric
- Rolled Throughput Yield
- Six Sigma Approach
- Six Sigma Process
- Six Sigma System
- Six Sigma System

Lesson 3: Lean (Introduction)
- Understand the history of Lean and the value it brings to an organisation
- The philosophy and goals of Lean Manufacturing
- Understand how Lean integrates with Six Sigma

Lesson 4: Six Sigma Roles and Responsibilities (Introduction)
- Understand Six Sigma key players
- Understand team stages in six sigma projects
- Understand the different modes of team communication

Lesson 5: Understanding the Define Phase of Six Sigma (Define Phase)
LSS Green Belt Define Phase - The Define Phase of the DMAIC methodology is constructed to introduce the fundamentals of Lean Six Sigma.
- Describe the two stages of the Define phase<

Lesson 6: Six Sigma Important Stakeholders (Define Phase)
- Describe the stakeholders in Six Sigma projects
- Understand how the changeover to Six Sigma implementation affects stakeholders

Lesson 7: Voice of the Customer (Define Phase)
- Understand the importance of the Voice of the Customer is Six Sigma projects
- Comprehending the Voice of the Customer

Lesson 8: Critical to Quality Flowdown (Define Phase)
- Understand the definition and purpose of Critical to Quality
- Understand the Critical to Quality steps or flowdown

Lesson 9: Performance Metrics (Define Phase)
- Explain what performance metrics are and they can be used to measure the effectiveness and efficiency of a process and establish goals for a project's anticipated outcome
- Explain the difference between process and business metrics
- Explain the impact of the cots of poor quality (COPQ)
- Know what questions to ask to determine the quality of the performance metrics

Lesson 10: Project Charter (Define Phase)
- Understand the purpose of a project charter
- Understand the requirements and the elements of a project charter
- Know how to phrase a problem statement
- Know what questions to ask to determine the quality of the performance metrics

Lesson 11: Wrap Up & Action Items (Define Phase)

Lesson 12: Processes and Process Characteristics (Measure Phase)

LSS Green Belt Measure Phase - The Measure Phase of the DMAIC methodology is constructed to introduce important Lean Six Sigma tools for characterising your business issues.

- Define a process
- Explain different types of processes
- Explain different process characteristics

Lesson 13: Process Maps and Flow Chart (Measure Phase)

- Understand how to create a process map
- Understand the different types of process maps
- Describe process flow metrics and how they are used

Lesson 14: Data Types and Measurement Scales (Measure Phase)

- Describe the difference between attribute and variable data
- Understand the difference between continuous and discrete data
- Understand the difference between nominal, ordinal, interval and ratio scales
- Know how to express data in different scales

Lesson 15: Data Collection (Measure Phase)

- Understand how to choose different data collection methods
- Know how to use check sheets and when to use different types of check sheets
- Understand the advantages and disadvantages of automated gauging
- Know how to code data and the advantages and disadvantages of coding data
- Understand the concepts of data integrity and accuracy

Lesson 16: Sampling Strategies (Measure Phase)

- Understand the concept of sampling and the different types of sampling strategies
- Apply probability sampling strategies
- Apply non-probability sampling strategies
- Know how to calculate and determine sample size for continuous and discrete data

Lesson 17: Fishbone Diagram (Measure Phase)

- Understand the purpose and meaning of the Ishikawa or Fishbone diagram
- Apply the Fishbone diagram
- Apply non-probability sampling strategies
- Know how to calculate and determine sample size for continuous and discrete data

Lesson 18: Relational Matrix /Prioritisation Matrix (Measure Phase)

- Understand that a relational matrix is a tool used to measure which of the input variables has the greatest effect on output
- Know when and how to use a relational matrix
- Understand the differences between the X-T matrix and the Quality Function Deployment (QFD)

Lesson 19: Basic Statistics (Measure Phase Module)

Lesson 20: Graphical Methods (Measure Phase)

- Explain the various statistics used to express location and spread of data
- Describe the characteristics of a Normal Distribution
- Explain the measures of dispersion
- Understand and use measures of symmetry
- Explain the Central Limit Theory
- Explain frequency distribution

- Understand how to construct histograms and differences in distribution shape
- Construct a histogram using Minitab
- Construct a stem and leaf plot
- Construct a box plot
- Construct a run chart
- Explain the significance of P values in relation to hypotheses
- Compare graphical methods and decide which is best to use

Lesson 21: Gauge R and R (Measure Phase)
- Understand the concept of gauge repeatability and reproducibility
- Understand the concepts of accuracy, precision, linearity, stability and bias
- Apply Gauge R and R
- Apply Gauge R and R regression analysis

Lesson 22: Process Capability Analysis (Measure Phase)
- Understand causes of variation
- Estimate Capability for Continuous Data
- Describe the impact of Non-normal Data on the analysis presented in this module for Continuous Capability
- Estimate Capability for Attribute Data

Lesson 23: Wrap Up & Action Items (Measure Phase)

Lesson 24: Graph and Data Analysis (Analyse Phase)
- Construct a scatter diagram
- Understand correlation and regression analysis
- Apply the method of least square
- Apply a simple linear regression model
- Apply multiple linear regression analysis

Lesson 25: Multi-Vari Analysis (Analyse Phase)
- Perform a Multi-Vari Analysis
- Interpret and a Multi-Vari Graph
- Identify when a Multi-Vari Analysis is applicable

Lesson 26: Intro to Hypothesis Testing (Analyse Phase)
- Articulate the purpose of Hypothesis Testing
- Explain the concepts of the Central Tendency
- Be familiar with the types of Hypothesis Tests
- Statistical inference
- Understand the concepts between statistical and practical significance
- Calculate point and interval estimations
- Calculate margin of error and sample size
- Calculate confidence intervals

Lesson 27: Hypothesis Testing Normal Data (Analyse Phase)

Lesson 28: Hypothesis Testing Non-Normal Data (Analyse Phase)

- Determine appropriate sample sizes for testing Means
- Conduct various Hypothesis Tests for Means
- Properly Analyse Results
- Be able to conduct Hypothesis Testing of Variances
- Understand how to Analyse Hypothesis Testing Results

- Conduct Hypothesis Testing for equal variance
- Conduct Hypothesis Testing for Medians
- Analyse and interpret the results
- Calculate and explain test for proportions
- Calculate and explain contingency tests

Lesson 29: Pareto Charts (Analyse Phase)

- Explain the objectives of a Pareto chart
- Construct a Pareto chart
- Test proportion = specified value
- Test if two proportions are equal

Lesson 30: Failure Mode and Effects Analysis (Analyse Phase)

- Explain the of conducting FMEA and its various elements
- Explain and calculate Risk Priority Number
- Understand procedures involved in conducting FMEA
- Understand differences of design and process FMEA
- Explain advantages and disadvantages of conducting FMEA

Lesson 31: Non-Value Added Activities (Analyse Phase)

- Understand the seven types of process waste
- Understand the difference between value and non-value added activities
- Identify non-value added activities from process maps

Lesson 32: Value Stream Mapping (Analyse Phase)

- Understand VSM process and symbols used
- Create a Value Stream Map
- Understand the difference between cycle time and takt time
- Know when to use Lean Systems
- Construct a spaghetti chart
- Outline the benefits of VSM

Lesson 33: Wrap Up & Action Items (Analyse Phase)

Lesson 34: Generate New and Re-used Solutions (Improve Phase)

LSS Green Belt Improve Phase - The Improve Phase of the DMAIC methodology is constructed to introduce important Lean Six Sigma tools for properly controlling solutions.

- Generate solution ideas
- Apply six thinking hats to evaluate solutions
- Understand the role of bench-marking solutions
- Understand the concept of process entitlement

Lesson 35: 5S (Improve Phase)

- Understand the 5 concepts in the 5S model

Lesson 36: Evaluate and select top solution (Improvement Phase)

- Understand the effect of 5S on improvements

- Understand the approach to design and implement a solution
- Prepare process maps that reflect the desired state
- Understand the concept of poka-yoke (mistake proofing)
- Understand the steps to pilot the top solution

Lesson 37: Designing Experiments (Improve Phase)

- Understand the concept of experiment design and the terminology
- Describe the difference between a physical model and a DOE model
- Explain an OFAT experiment and its primary weakness
- Shown Main Effects Plots and interactions, determine which effects and interactions may be significant
- Create a Full Factorial Design

Lesson 38: Kaizen and Kanban and Theory of Constraints (Improvement Phase)

- Understand the concept of Kaizen and Demming cycle and a Kaizen event
- Understand the concept of Kanban and the Push vs Pull system of production
- Know how to create strategic buffer
- Understand the Theory of Constraints and the five focusing steps

Lesson 39: Wrap Up & Action Items (Improve Phase)

Lesson 40: Statistical Process Control - SPC (Control Phase)

- Describe the elements of an SPC Chart and the purposes of SPC
- Understand how SPC ranks in defect prevention
- Describe the special cause detection rules
- Design subgroups if needed for SPC usage
- Understand the differences between Attribute and Continuous Control Charts
- Create an I-MR control chart
- Create an X-bar R chart
- Create an X-bar S chart
- Create P and Np charts
- Create a U chart
- Create time-weighted charts
- Explain the purpose of a Visual Factory

Lesson 41: Total Productive Maintenance (Control Phase)

- Explain the concept of TPM
- Understand the 8 pillars of TPM
- Explain the benefits of TPM

Lesson 42: Selecting Solutions (Control Phase)

- Conduct a cost benefit analysis to select the best solution
- Understand the requirement to reanalyse the measurement system
- Understand how the Lean tools depends on each other

- Understand how tools must document the defect prevention created in the Control Phase

Lesson 43: Control Plan (Control Phase)

- Understand the purpose of a Control Plan
- Understand the purpose of a documentation plan
- Understand the concept of lessons learned

Lesson 44: Wrap Up & Action Items (Control Phase)
